Introduction

The FrSky Remote NFC Panel is a convenient tool that can safely control the power supply by utilizing a set switch on the radio to enable/disable the power connection remotely, or by the switchboard using NFC Panel while having the device (RB unit, PowerSwitch, etc.) with battery always connected. This kit is composed of a Remote NFC Panel base and NFC Key. Quickly combine all parts, now you can simply utilize the NFC key or the functional switch to manage the power supply without having to plug in/unplug the battery!

Overview

Specifications

- Dimension: 33×19×6.2mm(L×W×H)
- Weight: 10.2g
- Operating Voltage Range: 4-38V

Features

- Supports remote power control by ETHOS radios
- Safe and contactless NFC switch On/Off design
- Avoid the hassle of plugging in / unplugging the battery
- The power is enabled by default while the NFC base panel is connected

How to use the Remote Switch feature?

(ETHOS v1.5.0 or later version is required.)

Please make sure the receiver has been registered and bound to the ETHOS radio at first;

IRe-shu

STEP 2

Connect the Remote NFC panel to the radio by the S.Port; (Please ensure the firmware of the device is upgraded to the latest version.)

STEP 3

C Device config			
Air speed	Current SBEC		Gas Suite
GPS	Lipo voltage	RB 30/40	RPM
SxR	SxR calibration	Variometer	V\$600
XAct	Pressure	Temperature	

Move to the [Device Config] menu and enter into the [Remote NFC] tool interface in ETHOS;

STEP 4

ETHOS	51514 0
	S.Port connector 🔻
	Internal module 🔻
	CH1
	OFF 👥 🛑 ON
	Bind
	ETH

Enable the [Wireless] mode and set an application channel for the Remote feature;

STEP 5

< Remote NFC	ETHOS	alai40
Module		S.Port connector 💌
Bind module		Internal module 💌
Switch channel		CH12
Wireless		OFF ON
Press [Bind] to bin	d the Rem	ote NEC panel to the

Press [Bind] to bind the Remote NFC panel to the radio;

STEP 6

Poping up a window displaying "Bind OK" means the setting of the Remote feature is completed;
